7 Configuration

We've tried to keep the number of changes to a standard web project created in Visual Studio as small as possible.

The following key points should be considered.

7.1 .NET Versions

51Degrees.mobi requires .NET version 2.0 with SP 2 installed as minimum requirement. This [link](#) provides the required service pack. Unpredictable behaviour may result if the correct service pack is not installed.

Higher versions of .NET can be used.

7.2 Trust

In order to ensure support for shared hosting environments the 51Degrees.mobi Framework can be configured to operate in medium [trust](#) configuration. The default web.config files provided with templates use full trust.

If configured to use medium trust image controls that use a gif format image as source and require resizing may appear dithered when rendered on some mobile devices. Gif format images are not recommended for environments which will use medium trust configuration.
